The Department of Dermatology takes pride in offering the highest quality medical and surgical care for diseases and conditions of the skin, hair, and nails. Our recognized leaders in skin health offer services for adults, adolescents, and children. Our department is equally balanced with experienced, skilled senior members and energetic, creative junior faculty members collaborating on patient care, research, and education.

We offer a range of educational opportunities to prepare future dermatologists, as well as non-dermatologist clinicians. Our medical education curriculum includes a selective clinical clerkship and advanced electives in clinical practice, research, and dermatopathology.

Our three-year residency program is accredited by the Accreditation Council for Graduate Medical Education (ACGME) and provides outstanding professional training for residents in the latest skills and knowledge of dermatology in order to provide patients with quality care. Residents get comprehensive training in adult and pediatric dermatology and dermatologic surgery. The correlation of cutaneous pathophysiology and histologic findings with clinical disease and response to therapy is strongly emphasized in our clinical services. While the emphasis of training in this department is clinical, research (either clinical or laboratory) is encouraged.

Our one-year ACGME-accredited Micrographic Surgery and Dermatologic Oncology fellowship provides a robust training experience in the evaluation and treatment of dermatologic oncology patients undergoing Mohs micrographic surgery within a multi-disciplinary setting.
