Website: https://medicine.uiowa.edu/urology/

Urology encompasses the subspecialty areas of urologic nephrology, oncology, and endocrinology; male reproductive physiology; erectile dysfunction; neurourology; pediatric urology; urinary tract stone and infection, including endourology; laparoscopic and robotic urology; trauma and reconstructive urology; urodynamics and female urology; diagnostic urology; and urinary tract obstruction.

The Department of Urology offers instruction in all of these areas to M.D. and graduate students and provides continuing education for the delivery of urologic care.

Continuing Education
The department offers continuing education activities throughout the year for urologic and family practitioners. These activities are conducted by the faculty, whose interests include pediatric urology, reproductive physiology and male infertility, urologic oncology, urinary tract stone (including endourology/laparoscopy), robotic surgical procedures, trauma and reconstructive urology, female urology, and prostatic diseases.

Research
The department has earned international recognition for its studies of prostatic diseases. The urological laboratories conduct research and offer instruction in experimental oncology, cellular immunology, and infertility.

M.D. Training
The Department of Urology cooperates with several University of Iowa basic science departments to educate first-year M.D. students in the relationship between urology and the basic sciences. It collaborates with the Department of Microbiology and Immunology in teaching and research concerning immunology of genitourinary cancers and renal transplantation.

Second-, third-, and fourth-year M.D. students take Department of Urology courses that provide experience in all areas of urology. The department's selective two-week clerkship covers the fundamentals of these areas through experience in outpatient clinics, surgical settings, and inpatient units at University of Iowa Hospitals and Clinics, the Iowa River Landing, and the Iowa City VA Health Care System. M.D. students can take advanced elective courses of intensive study in any of the urologic subspecialties after completion of URO:8301 Clinical Urology.

Courses

<tbody>
<tr>
<td>URO:8301</td>
<td>Clinical Urology</td>
<td>2 s.h.</td>
</tr>
<tr>
<td></td>
<td>Work in urology unit, clinic; responsibility for patient care, working with residents.</td>
<td></td>
</tr>
<tr>
<td>URO:8401</td>
<td>Advanced Clerkship in Urology</td>
<td>4 s.h.</td>
</tr>
<tr>
<td></td>
<td>Experience as integral member of urological staff, junior resident level.</td>
<td></td>
</tr>
<tr>
<td>URO:8402</td>
<td>Advanced Clerkship Pediatric Urology</td>
<td>2,4 s.h.</td>
</tr>
<tr>
<td></td>
<td>In-depth study of pediatric urology topics. Prerequisites: URO:8301. Requirements: M.D. enrollment.</td>
<td></td>
</tr>
<tr>
<td>URO:8403</td>
<td>Urology Oncology</td>
<td>2,4 s.h.</td>
</tr>
<tr>
<td></td>
<td>Multispecialty exposure to diagnosis and treatment of patients with current and newly-diagnosed urologic malignancies. Requirements: M.D. enrollment.</td>
<td></td>
</tr>
<tr>
<td>URO:8404</td>
<td>Female Pelvic Floor Dysfunction</td>
<td>2,4 s.h.</td>
</tr>
<tr>
<td></td>
<td>Requirements: M.D. enrollment.</td>
<td></td>
