

Master of Computer Science, MCS

The Master of Computer Science (MCS) is a course-based program for students who wish to enhance their careers with advanced knowledge of computer science. The MCS program does not include a thesis requirement.

Current and prospective graduate students should consult the Computer Science Graduate Handbook, available from the department's office and its website. The handbook provides detailed information about specific degree requirements, such as required courses, examinations, and dissertation requirements.

Learning Outcomes

Students gain:

- in-depth and up-to-date knowledge of concepts and/or technologies covering a breadth of computer science;
- problem-solving expertise in the context of the areas covered;
- a grounding in theoretical aspects of computer science; and
- exposure to cutting-edge research.

Requirements

The Master of Computer Science (MCS) requires a minimum of 32 s.h. of graduate credit, including at least 24 s.h. earned at the University of Iowa. Students must maintain a UI cumulative grade-point average of at least 2.75. Consult the Computer Science Graduate Handbook for detailed information about MCS requirements and graduate study policies.

The Master of Computer Science requires the following coursework.

Theory

Course #	Title	Hours
One of these:		
CS:4330	Theory of Computation	3
CS:4350	Logic in Computer Science	3
CS:4980	Topics in Computer Science II (if topic is approved by the director of graduate studies)	3
CS:5340	Limits of Computation	3
CS:5350	Design and Analysis of Algorithms	3
CS:5360	Randomized Algorithms	3
CS:5370	Computational Geometry	3
CS:5850	Programming Language Foundations	3
CS:5860	Lambda Calculus and Applications	3

Algorithms

Course #	Title	Hours
This course:		
CS:4310	Design and Implementation of Algorithms	3

Colloquium

Students are graded on a satisfactory/unsatisfactory (S/U) basis. They must attend at least 80% of scheduled talks to earn a satisfactory grade in the course.

Course #	Title	Hours
This course:		
CS:6000	Research Seminar: Colloquium Series (taken twice for 1 s.h. each)	2

Electives

Students complete their remaining 24 s.h. (eight additional courses) with a combination of computer science graduate courses, research and project courses, and non-computer science graduate courses approved by their advisor. The choice of electives must satisfy the following constraints.

- At least six courses (18 s.h.) must be classroom-based computer science graduate courses numbered 4300 or above, excluding CS:5110 Introduction to Informatics, CS:5990 Individualized Research or Programming Project, CS:6000 Research Seminar: Colloquium Series, CS:6990 Readings for Research, and CS:7990 Research for Dissertation.
- At most, one offering of CS:5990 Individualized Research or Programming Project may be taken. This course is an excellent option for students interested in exploring an area in computer science beyond that provided by computer science classroom-based courses. Students interested in pursuing a PhD usually benefit from taking CS:5990.
- At most, two technical courses (approved by the advisor) that are not computer science graduate courses may be taken. For students who want to take courses outside the department, those in mathematics, statistics, electrical engineering, industrial engineering, and management sciences are some popular options. Students may also include one computer science course taken during their first year in the MCS program from these: CS:3620 Operating Systems, CS:3640 Introduction to Networks and Their Applications, or CS:3820 Programming Language Concepts.

Software Engineering Subprogram

The Department of Computer Science, with the Department of Electrical and Computer Engineering, offers an MCS subprogram in software engineering. Students receive a software engineering subprogram designation on their transcript after they complete CS:5800 Fundamentals of Software Engineering, CS:5810 Formal Methods in Software Engineering, CS:5820 Software Engineering Languages and Tools, and CS:5830 Software Engineering Project, and earn their MCS degree. Students should meet with the academic services coordinator to file the appropriate paperwork when they apply for the degree if they did not originally declare their intent to complete the software engineering subprogram.

Admission

Admission decisions are based on prior academic performance, letters of reference, and the applicant's statement about background and purpose. Applicants must meet the admission requirements of the Graduate College; see the Manual of Rules and Regulations on the Graduate College website.

A version of the BA/MCS combined program is available for Grinnell College undergraduate students pursuing a BA degree in computer science who want to earn the MCS at the University of Iowa.

Career Advancement

Students pursue software design and development careers in the technology sector, including UX, mobile, and web development. Recent graduates hold positions at technology giants such as Microsoft, Google, Yahoo, or Intel, while others have taken positions in internationally established organizations whose primary business lies in the consulting, financial, health care, insurance, or media/entertainment sectors. A few MCS students enter the start-up market or pursue additional graduate education leading to the PhD at the University of Iowa or elsewhere.

Academic Plans

Sample Plan of Study

Sample plans represent one way to complete a program of study. Actual course selection and sequence will vary and should be discussed with an academic advisor. For additional sample plans, see MyUI.

Master of Computer Science, MCS

This sample plan is currently being reviewed and will be added at a later date.
