Geographical and Sustainability Sciences

Chair
• David A. Bennett

Director, Undergraduate Studies
• Marc A. Linderman

Director, Graduate Studies
• Eric Tate

Undergraduate major: geography (B.A., B.S.)
Undergraduate minors: geographic information science; geography
Undergraduate certificate: geographic information science
Graduate degrees: M.A. in geography; Ph.D. in geography
Faculty: https://clas.uiowa.edu/geography/people/faculty
Website: https://clas.uiowa.edu/geography/

The importance of geographical and sustainability sciences is rooted in the complexity of social and environmental problems. We live on a dynamic planet, one that is constantly changing in response to human and natural processes that are highly interconnected. Geographers study the interactions of people and their environment to better understand these intricately related processes. At the University of Iowa, the department teaches and conducts research on human and natural systems and how interactions between these systems shape the world we live in. Cutting edge technologies, such as geographic information systems (GIS), satellite imagery, and Global Positioning System (GPS), are used to help inform decision making at geographic scales and to analyze and visualize geographic processes.

The Department of Geographical and Sustainability Sciences offers undergraduate programs leading to a Bachelor of Arts or Bachelor of Science degree. Undergraduate students select from three tracks: environmental studies, geographic information science (GISci), and health and society. Each track requires introductory and upper-level geography and sustainability courses, as well as course work from other departments. The department also offers a minor in geography and a minor and certificate in geographic information science. It administers the interdisciplinary environmental policy and planning major and collaborates with other departments to offer the undergraduate Certificates in Social Science Analytics, Sustainability, and Wind Energy (see below). The department also participates in the University’s internship program for students; see Career Center Programs (University College) in the Catalog.

Geography and sustainability courses provide a background for many related professions including law, health care, planning (urban, regional, environmental, or transportation), environmental or transportation engineering, and international business, and are commonly required for students preparing to teach at elementary and secondary levels.

Geographical and sustainability science students acquire valuable skills in computer-based geographic information systems (GIS) software used to investigate and solve many environmental and social problems. Opportunities for graduates with GIS training are growing rapidly in both private and governmental organizations. To gain related knowledge, get hands-on experience, and conduct independent research, students have access to the department's state-of-the-art Geographical Information Systems Instructional Lab (GISIL).

For more information, see Facilities [p. 2] in this section of the Catalog.

The Department of Geographical and Sustainability Sciences offers Master of Arts and Doctor of Philosophy degrees. Graduate programs focus on studies that extend understanding of the environmental consequences of human decisions at local, regional, and global scales; processes that lead to geographic patterns in health and disease; technologies that help capture, represent, visualize, and analyze geographic patterns and processes; and processes that produce ecosystem services and sustainable futures. Within this broad domain, the department has strengths in environmental justice, environmental modeling, urban ecology, GIScience and GIS, land use/land cover change, and health geography. The mission of the graduate program is to empower graduates with the ability to conduct significant research. In addition to offering graduate degree programs, the department administers the geoinformatics subprogram of the graduate informatics certificate; see Certificate in Informatics (Graduate College) in the Catalog.

Related Certificates

Social Science Analytics

The Department of Geographical and Sustainability Sciences collaborates with the Departments of Political Science, Sociology, and Statistics and Actuarial Science (College of Liberal Arts and Sciences) to offer the undergraduate program in social science analytics. The Department of Political Science administers the certificate; see the Certificate in Social Science Analytics in the Catalog.

Sustainability

The Department of Geographical and Sustainability Sciences collaborates with the Departments of Biology, Earth and Environmental Science (College of Liberal Arts and Sciences), Civil and Environmental Engineering (College of Engineering), and Urban and Regional Planning (Graduate College) as well as the Tippie College of Business to offer the undergraduate program in sustainability. The certificate is administered by University College; see the Certificate in Sustainability in the Catalog.

Transportation Studies

The Transportation Studies Program offers the Certificate in Transportation Studies. The program focuses on the varied and complex problems of transportation and on interdisciplinary approaches to addressing them. The Departments of Civil and Environmental Engineering, Industrial and Systems Engineering, Mechanical Engineering (College of Engineering), Economics (Tippie College of
Business, Geographical and Sustainability Sciences, and the
School of Urban and Regional Planning (Graduate College)
participate in the program. The certificate is administered by
the School of Urban and Regional Planning. See the Certificate
in Transportation Studies in the Catalog.

Wind Energy
The Certificate in Wind Energy includes course work
and faculty expertise from the Departments of Civil and
Environmental Engineering, Electrical and Computer
Engineering, Mechanical Engineering (College of Engineering),
and Geographical and Sustainability Sciences. The certificate
is administered by the Department of Mechanical Engineering; see the Certificate in Wind Energy in the Catalog.

Programs
Undergraduate Programs of Study
Majors
• Major in Geography (Bachelor of Arts)
• Major in Geography (Bachelor of Science)
Minors
• Minor in Geographic Information Science
• Minor in Geography
Certificate
• Certificate in Geographic Information Science

Graduate Programs of Study
Majors
• Master of Arts in Geography
• Doctor of Philosophy in Geography

Facilities
The department houses three geographic information
computational laboratories. They support a variety of
graphic information system (GIS) software packages,
including the latest software from Esri (ArcGIS) and Erdas
(Imagine) as well as a suite of other commercial and open-
source software. All lab computers are regularly updated
to ensure that they are capable of running the latest software at
peak performance.

The Geographical Information Systems Instructional Lab
(GISIL) is the department’s center for GIS teaching as well
as a place where students conduct geographic and GIS-
related projects. It is equipped with 27 networked student
workstations, instructional support technology (e.g., CRT
projection), and a suite of peripherals, including a LiDAR 3-D
scanner, high-end global positioning system (GPS) units, and a
large-format printer.

The environmental modeling and GIS research laboratories
contain state-of-the-art machines (Windows and Linux
platforms), geoprocessing and statistical software, and an
array of software development tools. Projects requiring
massive storage or high-performance computing have
access to additional resources managed by the University’s
Information Technology Services research support group.
The University of Iowa is a charter member of Internet2,
with a high-performance network link to the Department of
Geographical and Sustainability Sciences. The University also
is a member of the University Consortium on Geographic
Information Science.

To aid studies of water resources and physical geography, the
department has a laboratory for the analysis of vegetation,
soil, and water quality. The laboratory has a variety of field
equipment, including soil probes, portable meteorological
stations, GPS, ground-based 3-D LiDAR, anemometers,
spectrometers, light sensors, and data loggers.

Faculty and graduate students participate in multidisciplinary
working groups through the University’s Program in Applied
Mathematical and Computational Sciences, the Center for
Global and Regional Environmental Research, the Center for
Health Effects of Environmental Contamination, International
Programs, the Institute for Rural and Environmental Health,
the Iowa Quaternary Studies Group, and the Public Policy
Center. Participation in multidisciplinary working groups also
is available through interdisciplinary research grants with
investigators from other University of Iowa academic units,
for example, the College of Engineering, the Carver College
of Medicine, and the College of Public Health.

Geographic researchers also have access to other University
of Iowa resources, such as the University’s Main Library,
whose collections include more than 115,500 maps, 3,600
tilases and reference works; and around 100,000 aerial
photographs, primarily of Iowa.

Courses

Geography Courses

GEOG:1000 First-Year Seminar 1 s.h.
Small discussion class taught by a faculty member; topics
chosen by instructor; may include outside activities (e.g.,
films, lectures, performances, readings, visits to research
facilities). Requirements: first- or second-semester standing.

GEOG:1020 The Global Environment 3 s.h.
Underlying processes driving human/environment interaction,
including climate change, deforestation, and natural disasters;
environmental challenges, including declining biological
diversity; human response to more frequent severe climate
events; production of a more sustainable future. GE: Natural
Sciences without Lab.

GEOG:1021 The Global Environment Lab 1 s.h.
Laboratory application of concepts discussed in GEOG:1020;
computer-based and traditional approaches to the
investigation of earth’s processes, including earthquakes,
water and energy balances, climate and weather, and soil
development. Corequisites: GEOG:1020, if not taken as a
prerequisite. GE: Natural Sciences Lab only.

GEOG:1030 Our Digital Earth 3 s.h.
New technologies that have revolutionized how people
navigate in unfamiliar places, locate friends and colleagues,
manage cities, and confront environmental problems during
the past decade; fundamental concepts related to how
graphic information is used to better understand and
manage the world and our everyday lives.
<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GEOG:1050</td>
<td>Foundations of GIS</td>
<td>4 s.h.</td>
<td>Introduction to concepts and methods associated with geographical information systems (GIS) technology; remote sensing, map making, data collection, and application of GIS to real-world problem solving.</td>
</tr>
<tr>
<td>GEOG:1060</td>
<td>Geography of Asia: From Japan to Pakistan</td>
<td>3 s.h.</td>
<td>Varied cultures and environments of Asia; different geographic regions and processes in Asian development. GE: International and Global Issues.</td>
</tr>
<tr>
<td>GEOG:1065</td>
<td>Introduction to Spatial Analysis: Patterns and Processes</td>
<td>3 s.h.</td>
<td>Fundamental concepts and applications of spatial analysis; how clusters of crime in a community are identified; how patterns of disease are described within a community.</td>
</tr>
<tr>
<td>GEOG:1070</td>
<td>Contemporary Environmental Issues</td>
<td>3 s.h.</td>
<td>Global environmental challenges; ecological, economical, cultural, and geographical causes and effects; underlying science and potential solutions to global issues of sustainability. GE: International and Global Issues; Social Sciences.</td>
</tr>
<tr>
<td>GEOG:1090</td>
<td>Globalization and Geographic Diversity</td>
<td>3 s.h.</td>
<td>World regions including their physical environment, culture, economy, politics, and relationships with other regions; students learn about conflicts within and between regions. GE: International and Global Issues; Social Sciences.</td>
</tr>
<tr>
<td>GEOG:1015</td>
<td>Geography of Asia: From Japan to Pakistan</td>
<td>3 s.h.</td>
<td>Varied cultures and environments of Asia; different geographic regions and processes in Asian development. GE: International and Global Issues.</td>
</tr>
<tr>
<td>GEOG:1020</td>
<td>Introduction to Climatology</td>
<td>3 s.h.</td>
<td>Introduction to processes that lead to the patterns of plant and animal distributions we see across the globe; processes of focus include plate tectonics, climate, and human-ecological interactions; species management and conservation in relationship to climate and change in human patterns of environment. Prerequisites: BIOL:1141 or BIOL:1370 or BIOL:1261 or GEOG:1020 or BIOL:1412. Same as BIOL:2374.</td>
</tr>
<tr>
<td>GEOG:2130</td>
<td>World Cities</td>
<td>3 s.h.</td>
<td>Important urban centers, past and present, with focus on why cities exist and how they are organized; examination of different historical eras, including ancient, medieval, and modern; analysis of urban physical structures.</td>
</tr>
<tr>
<td>GEOG:2310</td>
<td>Introduction to Climatology</td>
<td>3 s.h.</td>
<td>Introduction to atmospheric processes that determine weather and climate; flow of energy through the atmosphere, distribution and movement of moisture and air, and atmospheric disturbances such as cyclones, hurricanes and tornadoes, and climate change. Recommendations: GEOG:1020 or similar earth systems science course. Same as EES:2310.</td>
</tr>
<tr>
<td>GEOG:2374</td>
<td>Biogeography</td>
<td>3 s.h.</td>
<td>Introduction to processes that lead to the patterns of plant and animal distributions we see across the globe; processes of focus include plate tectonics, climate, and human-ecological interactions; species management and conservation in relationship to climate and change in human patterns of environment. Prerequisites: BIOL:1141 or BIOL:1370 or BIOL:1261 or GEOG:1020 or BIOL:1412. Same as BIOL:2374.</td>
</tr>
</tbody>
</table>

Supervised readings in geography.
GEOG:3020 Earth Surface Processes 3 s.h.
Basic geomorphic and environmental processes that shape the earth's surface; emphasis on erosion, transport, deposition by land mass movement (creep, landslides, earth flow), fluid agents (wind, water, ice); methods used to study these processes. Prerequisites: EES:1050 or EES:1080 or ENVS:1080 or GEOG:1020 or EES:1085 or ENVS:1085. Same as EES:3020, ENVS:3020.

GEOG:3070 Hungry Planet: Global Geographies of Food 3 s.h.
Societal and environmental implications of past, current, and future global food supply examined from a geographical perspective; focus on questions of who eats what, where, and why; transformative history of agriculture, modern agribusiness and alternative food supplies, geopolitical implications of food production, food scarcity and rising food costs, urban versus rural agriculture, the obesity epidemic versus malnutrition, and the future of food. Same as GHS:3070.

GEOG:3110 Geography of Health 3 s.h.
Provision of health care in selected countries, with particular reference to the Third World; focus on problems of geographical, economic, cultural accessibility to health services; disease ecology, prospective payment systems, privatization, medical pluralism. Same as GHS:3111.

GEOG:3210 Health, Work, and the Environment 3 s.h.
Survey of environmental and occupational health hazards and the associated health risks of exposure; how public health protects society from these hazards; how public health policy can be influenced by science. Same as GHS:3210.

GEOG:3310 Landscape Ecology 3 s.h.
Landscapes as complex systems that arise from interactions among physical environments and species, including humans; exploration of how these interactions shape landscape ecosystems and influence landscape change through lecture, computer and field labs, and research discussion; key topics include causes and consequences of landscape pattern, techniques used to quantify and model landscape pattern, the role of humans in determining landscape structure and function, and conservation and management of species and landscapes. Prerequisites: GEOG:2310 or BIOL:2673 or BIOL:2673. Requirements: ecology course numbered 1000-4999.

GEOG:3320 Wetlands: Function, Geography, and Management 3 s.h.
Hydrological, geomorphological, and ecological processes and their interaction in wetlands; geographic differences in wetlands based on climate and hydrology; wetlands, lakes, and rivers; role of wetlands in drainage basin hydrology and flooding; values and valuation of wetlands; wetland law and wetland delineation; wetlands and water resources. Prerequisites: GEOG:2310 or GEOG:2374. Same as EES:3260.

GEOG:3331 Human Dimensions of Climate 3 s.h.
How climate shapes human societies; focus on how climate and climate variability affects food production, water use, energy use, and human disease systems (e.g., influenza, malaria, air pollution, diarrheal disease); climate change impacts (e.g., sea level rise, droughts, wildfires, famine); societal impact, adaptation and vulnerability, mitigation strategies; policy.

GEOG:3340 Ecosystem Services: Human Dependence on Natural Systems 3 s.h.
Ecosystem services—valuable goods and services produced by ecosystems (e.g., flood control, food production, water purification)—from an interdisciplinary perspective centering on geographic techniques used to measure, map, and model ecosystem services; methods used to incorporate ecosystem services into decision and policy making; how human activities alter these services. Prerequisites: GEOG:1050 and (GEOG:2374 or GEOG:3310 or EES:1080 or BIOL:2673 or BIOL:1370 or GEOG:1070 or EES:1080 or BIOL:2673 or GEOG:1020).

GEOG:3350 Urban Ecology 3 s.h.
Urban ecology as an interdisciplinary field that investigates relationships between natural and the systems in urban environments; students explore urban ecosystems through lecture, discussion of current research, and field-based research projects; and identify how cities can become more sustainable systems. Prerequisites: BIOL:2673 or BIOL:2673 or GEOG:2374. Requirements: GEOG:2374 or ENVS:2673 or introductory course in ecology, and junior standing.

GEOG:3360 Soil Genesis and Geomorphology 3 s.h.
Introduction to soil genesis, soil geomorphology, and classification including the basics of soil profile description and soil-landscape, soil-vegetation, and soil-climate relationships; emphasis on study of soils as the interface between living and non-living Earth systems and the role of soils in sustaining ecosystems and human societies; short field excursions and a weekend field trip. Requirements: college earth science and chemistry. Same as EES:3360.

GEOG:3400 Iowa Environmental Policy in Practice 3 s.h.
How Iowa government addresses environmental policy development and implementation; policy process and current environmental issues; students attend meetings with Iowa State legislators and relevant agency personnel in Des Moines, Iowa, to observe how policies move into practice in agency offices. Prerequisites: GEOG:1070 or POLI:3111 or GEOG:3780 or ANTH:3102. Requirements: junior or higher standing.

GEOG:3420 Sustainable Development and Green Building Concepts 3 s.h.
Green building and sustainable development trends and theories: water policy, ecosystem services, climate change, and public health; LEED certified building process and each of the associated credit categories (Sustainable Sites, Energy and Atmosphere, and Water Efficiency); how knowledge of green building and sustainable development can help lessen the environmental impact of built environments, improve the bottom line, and better plan for great communities.

GEOG:3500 Introduction to Environmental Remote Sensing 3 s.h.
Basic concepts and principles of remote sensing; sources of data; georegistration; digital processing and classification of remotely sensed images for extraction of environmental information; linkage of remote sensing techniques with GIS analysis. Same as IGPI:3500.

GEOG:3520 GIS for Environmental Studies 3 s.h.
Students learn new, more advanced techniques for the representation and study of human and natural systems using geographic information systems (GIS); application of this new knowledge to environmental management and problem solving. Prerequisites: GEOG:1050. Same as IGPI:3520.
GEOG:3540 Introduction to Geographic Visualization 3 s.h.
Introduction of basic concepts and techniques that underlie cartographic representation, interaction, and geovisualization; map symbolization and visual variables; spatiotemporal visualization, multivariate mapping, interactive cartography, animation, geovisual analytics, 3-D visualization, virtual and augmented reality. Prerequisites: GEOG:1050. Same as IGPI:3540.

GEOG:3550 Integrating Time into GIS 3 s.h.
Fundamental concepts for integrating temporal elements into geographic information systems (GIS); conceptual and formal models of time, models of change, event-based modeling, modeling of moving entities; topics related to fundamentals of spatiotemporal databases and query languages. Prerequisites: GEOG:1050.

GEOG:3560 Spatial Analyses of Wind Energy 3 s.h.
Underlying processes, measurement methods, and spatial analyses related to wind energy; students explore techniques for data collection and analysis; GIS-based approaches to renewable energy siting.

GEOG:3570 Light Detection and Ranging (LiDAR): Principles and Applications 3 s.h.
Basic principles and applications of Light Detection and Ranging (LiDAR); LiDAR as an essential technology for mapping and analyzing a vast range of topics, including hydrology flooding, transportation planning, and 3-D modeling. Recommendations: GEOG:3500 or EES:3100.

GEOG:3750 Environmental Quality: Science, Technology, and Policy 3 s.h.
Interpretation of pollutants and water pollutants; emphasis on environmental standards under existing laws, setting environmental priorities, risk assessments and comparisons; local, regional, national and international case studies in environment and health; socioeconomic and institutional considerations in designing environmental protection strategies; selected field trips. Prerequisites: STAT:1020.

GEOG:3760 Hazards and Society 3 s.h.
Examination of the impact and societal responses to natural and technological hazards; using case studies from around the world, students explore relationships between extreme events, human behavior, disaster management, public policy, and technology to understand what makes people and places vulnerable to hazards. Same as GHS:3760.

GEOG:3780 U.S. Energy Policy in Global Context 3 s.h.
Historical and contemporary aspects of U.S. governmental planning and policy on a wide range of energy issues in global context. Same as GHS:3780, HIST:3240.

GEOG:3800 Environmental Economics and Policy 3 s.h.
Reasons why markets fail in environmental realm (e.g., externalities, common pool resources, club goods, public goods); ecosystem services and techniques used for their valuation; revealed and stated preferences; cost-benefit analysis and role in policy-making process; tools to address environmental market failures, particularly command and control, taxes and subsidies, and mitigation markets; focus on air pollution, climate change, and water-related policies.

GEOG:3920 Planning Livable Cities 3 s.h.
Development of livable cities in the United States; economic, physical, environmental, and political forces that shape their growth; impact of planning, how it shapes the future of cities. Same as URP:3001.

GEOG:3940 Transportation Economics 3 s.h.
Overview of transportation markets—intercity, rural, urban; transportation modes—rail, highway, air, water, pipeline, transit; issues in finance, policy, planning, management, physical distribution, and environmental, economic, and safety regulation. Recommendations: ECON:1100 and ECON:1200. Same as ECON:3750, URP:3350.

GEOG:3992 Undergraduate Research arr.
Opportunity for undergraduate students to participate in faculty-led research projects.

GEOG:4010 Field Methods in Physical Geography 3 s.h.
Introduction to basic approaches to research design and of sampling environmental variables commonly used in environmental sciences; basic methods of sampling and lab analyses of vegetation, land cover, soils, and more.

GEOG:4020 Field Methods: Mapping and Mobile Computing 3 s.h.
Mapping techniques and mobile computing applications associated with GPS, wireless technologies, and data sampling techniques.

GEOG:4030 Senior Project Seminar 3 s.h.
Development of an independent research project, preparation of a research report, and presentation of the associated outcomes. Offered spring semesters.

GEOG:4150 Health and Environment: GIS Applications 3 s.h.
Introduction to how geographic information systems (GIS) and spatial statistics are used in the study of patterns of health and disease in space and time. Same as GHS:4150, IGPI:4150.

GEOG:4500 Applications in Environmental Remote Sensing 4 s.h.
Theory and practice of remote sensing and digital image processing; practical applications to human-environment interactions. Recommendations: GEOG:3500 or EES:3110 or ENVS:3110. Same as IGPI:4500.

GEOG:4520 GIS for Environmental Studies: Applications 3 s.h.
Project-driven course to advance student knowledge of geographic information systems (GIS); application of GIS to environmental change analysis, environmental assessment, hazard/risk analysis, and environmental decision making. Prerequisites: GEOG:3520. Same as IGPI:4520.

GEOG:4570 Spatial Analysis and Location Models 3 s.h.
Application of location models within GIS environments to support decision making; small area demographic forecasting, location-allocation models, regionalization problems, shortest path models, other spatial analysis methods used to support spatial decisions. Prerequisites: GEOG:1050.

GEOG:4580 Introduction to Geographic Databases 3 s.h.
Introduction to basic building blocks of spatial database design, spatial data models, structures, relationships, queries (SQL), indexing, and geoprocessing; design and construction of various types of spatial databases, including relational and big data approaches such as ArcGIS geodatabase, PostGIS/PostgreSQL, and MongoDB. Prerequisites: GEOG:1050. Same as IGPI:4581.

GEOG:4650 Simulation in Environmental Geography 3 s.h.
Exploration of how computer simulations are used in environmental studies, with focus on landscape ecology; students learn the basics of performing simulations and the principles and applications of simulation through readings and labs. Requirements: advanced courses in environmental geography or environmental science and senior standing.
GEOG:4750 Environmental Impact Analysis 4 s.h.
In-depth exposure to the history and evolution of the U.S. Environmental Impact Assessment (EIA) process; discussion of major court cases; ecological, economic, and political aspects of current environmental controversies; exposure to real-world scenarios that are crucial to understanding the EIA process in action; field trips to six or seven environmental control facilities in Iowa City and neighboring areas. Prerequisites: GEOG:1070. Same as URP:4750.

GEOG:4770 Environmental Justice 3 s.h.
Introduction to the field of environmental justice; understanding and addressing the processes that lead poor and marginalized communities to face a disproportionate degree of environmental risks and hazards. Same as GHS:4770.

GEOG:4870 Applied Geostatistics 3 s.h.
Applications of geostatistical methods to geology, geography, hydrology, environmental sciences, and engineering; variogram, Kriging, analysis of spatial-varied data with varied computer software in participants’ specialties. Same as EES:4870.

GEOG:4990 Senior Thesis 3 s.h.
Original research. Requirements: senior standing.

GEOG:4995 Honors Thesis arr.
Original research. Requirements: honors standing.

GEOG:5001 Readings arr.
Supervised readings by graduate students in topics of their choice.

GEOG:5010 Fundamentals of Geography 3 s.h.
Geography as an academic discipline; history, advances, epistemology, common themes.

GEOG:5050 Research and Writing in Geography 3 s.h.
Identification of research areas; research questions and hypotheses; responsible conduct of research; methodological decisions; research proposal and paper writing.

GEOG:5070 Special Topics arr.
Contemporary fields of inquiry, such as biophysical systems, GIS, locational analysis, water resources, economic geography, demographic analysis, environment, urbanization, transportation, and regional development.

GEOG:5650 Simulations in Landscape Ecology 3 s.h.
Dynamics of land use and land cover change explored through advanced use of computer simulations in landscape ecology; how simulation is used in the field; simulations based on landscape ecology questions, with analysis of results using typical landscape ecology metrics. Prerequisites: GEOG:4650.

GEOG:5800 Environmental Economics and Policy 3 s.h.
Reasons why markets fail in environmental realm (e.g., externalities, common pool resources, club goods, public goods); ecosystem services and techniques used for their valuation; revealed and stated preferences; cost-benefit analysis and role in policy-making process; tools to address environmental market failures, particularly command and control, taxes and subsidies, and mitigation markets; focus on air pollution, climate change, and water-related policies. Same as URP:5800.

GEOG:6100 Seminar in Health and Environment 3 s.h.
Research on health and environment.

GEOG:6264 Planning Sustainable Transportation 2-4 s.h.
Theories and methods of exerting public control over passenger and freight transportation; social and environmental regulation; effects of changing finance, regulation, and pricing policies, including privatization, tolls, impact fees. Same as URP:6265.

GEOG:6300 Seminar in Environment, Conservation, and Land Use 1-3 s.h.
Research on land use, water resources, conservation.

GEOG:6500 Seminar in Spatial Analysis and Modeling 1-3 s.h.
Research themes in spatial analysis, GIScience, simulation, remote sensing. Same as IGPI:6501.

GEOG:6635 Crossing Borders Seminar 2-3 s.h.

GEOG:7000 Geography Colloquium 1 s.h.

GEOG:7150 Research in Health and Environment 1-3 s.h.
Directed research in health and environment.

GEOG:7350 Research in Environment, Conservation, and Land Use 1-3 s.h.
Directed research in land use, water resources, conservation.

GEOG:7550 Research in Spatial Analysis and Modeling 1-3 s.h.
Directed research in spatial analysis, GIScience, simulation.

GEOG:7750 Research in Environmental Policy 1-3 s.h.
Directed research in environmental justice and policy.

GEOG:7999 Thesis arr.
