

Interdepartmental Studies, BA

Learning Outcomes

After completing any of the three tracks in the interdepartmental studies major—applied human services, business studies, or health science—students will:

- possess the mathematical skills to present and understand data and to create probability models, or to design, analyze, and interpret research using a correlational design;
- understand how social and/or political issues shape economic behavior, or how key anthropological concepts assist in comprehending global or societal problems; and
- synthesize key concepts or techniques related to the track they are pursuing.
