

# Pharmacy, MS

## Admission

The graduate program in pharmacy at the University of Iowa primarily admits students pursuing a PhD. Admission to the MS in pharmacy is granted only under special circumstances, which may include a requirement from an international government funding source, a Fulbright or similar scholarship that specifies a master's degree, or employment in industry where a targeted set of skills or knowledge is needed to enhance professional value. A master's degree is not required to apply to the PhD program.

Applicants must meet the admission requirements of the Graduate College. They must:

- hold a bachelor's degree from a U.S. institution or an equivalent degree from another country as determined by University of Iowa Admissions; and
- have a grade-point average of at least 3.00

Visit Graduate Degree: How to Apply on the College of Pharmacy website for a list of program requirements and application deadlines. Academic requirements for maintaining graduate registration are determined by the Graduate College and by the individual divisions in the College of Pharmacy.
