Master of Clinical Anatomy, MCA

The Master of Clinical Anatomy (MCA) program provides a comprehensive education focused on developing clinically relevant content knowledge in the anatomical sciences, including anatomy, histology, neuroanatomy, and embryology. The degree is designed to prepare students who wish to advance to professional programs (e.g., MD, DDS, PA, DPT, etc.) or continue into educational professions or other health-related careers. The MCA program is well-suited for students looking to improve their competitive applications or who want to expand their understanding of the anatomical sciences to make a more informed career decision.
