Iowa Lakeside Laboratory Courses (IALL)

This is a list of all Iowa Lakeside Laboratory courses. For more information, see Iowa Lakeside Laboratory.

**IALL:1010 Earth, Air, and Sky** 1-4 s.h.
Essentials of earth science, including astronomy, meteorology, geology, and paleontology; includes laboratory and fieldwork.

**IALL:1030 Natural History Workshop** 1-2 s.h.
A specific aspect of the upper Midwest's natural history, or techniques for studying natural history; amphibians and reptiles, birds and birding, nature photography, mushrooms and other fungi, Iowa's trees and forests, fish biology, prairies, common algae, common insects, aquatic plants, life in rivers, life in lakes, mosses and liverworts, natural history of Iowa Great Lakes region, field archaeology, scuba diving, astronomy, nature sketching; five-day, nontechnical introductions.

**IALL:1040 Field Archaeology** 4 s.h.
Nature of cultural and environmental evidence in archaeology, how such evidence is used to model past human behavior and land use; emphasis on Iowa prehistory; basic reconnaissance surveying, excavation techniques.

**IALL:1045 Illustrating Nature: Photography** 1-2 s.h.
Beginning/intermediate technique and composition in color photography of natural areas, their plants and animals.

**IALL:3034 Topics in Ecology and Sustainability** 1-4 s.h.
Scientific introduction at intermediate level to ecology and evolution of important groups of organisms: algae to vertebrates, different ecological phenomena (e.g., fire and climate change), varying landforms, different ecosystems (e.g., prairies and aquatic systems); emphasis on sustainability with introduction to concepts, issues, and practices; ability to communicate environmental information through a variety of means. Requirements: one general biology course.

**IALL:3101 Science Teaching Methods** 1-3 s.h.
Development and implementation of laboratory exercises suitable for inclusion in elementary, middle, high school, and community college biology, geology, and environmental courses; exercises built around common organisms and ecosystems in Iowa; animal biology, plant biology, fungi and lichens, aquatic ecology, prairie ecology, wetland ecology, limnology, animal behavior, insect ecology, biology of invertebrates, noninvasive use of living organisms, Project WET; field trips.

**IALL:3103 Aquatic Ecology** 4 s.h.
Analysis of aquatic ecosystems; emphasis on basic ecological principles; ecological theories tested in the field; identification of common plants and animals. Requirements: ecology, chemistry, and physics courses.

**IALL:3104 Nature Based, Early Childhood Teaching Methods Using 'The Project Approach'** 3-4 s.h.
Examination of the value of young children's direct experiences in nature through inquiry-based learning; 'The Project Approach' builds on children's natural curiosity and enables them to interact, question, connect, problem solve, communicate, and reflect; students follow steps for implementing a nature-based project within their own classroom setting as they insure the needs of diverse learners are met for both social and academic learning; designed for early childhood teachers.

**IALL:3109 Ecology and Systematics of Algae** 2,4 s.h.
Ecology, morphological structure, phylogeny, and taxonomy of freshwater algae based on field material collected; emphasis on genus-level identifications, biodiversity, ecology; habitat visits to lakes, fens, streams, rivers; algal ecology.

**IALL:3113 Undergraduate Independent Study** 1-4 s.h.
Requirements: junior or senior standing.

**IALL:3114 Field Mycology** 2 s.h.
Identification and classification of common fungi; techniques for identification, preservation, and culture practiced with members of various fungi groups.

**IALL:3117 Ecology and Systematics of Diatoms** 4 s.h.
Field and laboratory study of freshwater diatoms; techniques in collection, preparation, and identification of diatom samples; study of environmental factors affecting growth, distribution, taxonomic characters; project design and execution, including construction of reference and voucher collections; data organization and analysis.

**IALL:3122 Prairie Ecology** 4 s.h.
Basic patterns, underlying physical and biotic causes of regional and local distributions of North American prairie plants and animals; field and laboratory analysis and projects. Requirements: familiarity with basic principles of biology and ecology.

**IALL:3126 Ornithology** 2-4 s.h.
Biology, ecology, and behavior of birds; emphasis on field studies of local avifauna; group projects with focus on techniques of population analysis and methodology for population studies.

**IALL:3131 Ecology** 4 s.h.
Introduction to the principles of ecology at the population, community, ecosystem levels; field studies of local lakes, wetlands, and prairies used to examine factors that control distributions, interactions, and roles of plants and animals in native ecosystems. Requirements: two semesters of introductory biology.

**IALL:3141 Environmental Policy** 3 s.h.
Theory and practice of environmental policies, including the study of U.S. federal environmental policies with direct and indirect bearings on water issues; focus on policy history, implementation, and effectiveness; how policies interact with each other, how local stakeholders perceive their pros and cons, and linkages between local implementation efforts and regional and large-scale impacts.

**IALL:3162 Restoration Ecology** 2 s.h.
Ecological principles for restoration of native ecosystems; establishment (site preparation, selection of seed mixes, planting techniques) and management (fire, mowing, weed control) of native vegetation; evaluation of restorations; emphasis on prairie restoration and wetland vegetation. Requirements: ecology course.

<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>IALL:3164</td>
<td>Animal Behavior</td>
<td>2 s.h.</td>
</tr>
<tr>
<td></td>
<td>Examination of ecological and evolutionary theories of animal behavior through field studies of animal coloniality, courtship, territoriality, predator defense, habitat selection, foraging, mating systems, and parental care. Requirements: two biology courses.</td>
<td></td>
</tr>
<tr>
<td>IALL:3175</td>
<td>Soil Formation and Landscape Relationships</td>
<td>2-4 s.h.</td>
</tr>
<tr>
<td></td>
<td>Relationships between soil formation, geomorphology, environment; soil description, classification, geography, mapping, interpretation for land use.</td>
<td></td>
</tr>
<tr>
<td>IALL:3176</td>
<td>Glacial Geomorphology</td>
<td>2,4 s.h.</td>
</tr>
<tr>
<td></td>
<td>Field-based introduction to glacial environments and processes including the origin of sediments, landforms, and landscapes produced in glacial and associated environments; aeolian (wind) processes, river and lacustrine systems, and mechanisms and chronologies of climate change.</td>
<td></td>
</tr>
<tr>
