Molecular Medicine Courses (MMED)

This is a list of all accounting courses. For more information, see Molecular Medicine.

**MMED:3310 Practical Data Science and Bioinformatics**  
Understanding how to access large biological data sets and use them to answer biological questions is an important skill for researchers; immersive introduction to computational handling of data; how to access and analyze publicly available data; critically evaluate data quality and analysis in context of measuring gene expression; basic coding in R/RStudio, plotting and data display, fitting and regression, statistical inference, statistical models, downloading and data wrangling; basic introduction to machine learning (clustering); for students with no computational background. Prerequisites: BIOC:1411 with a minimum grade of C- and BIOL:1412 with a minimum grade of C-. Requirements: college algebra.

**MMED:6227 Cell Fate Decisions**  
1 s.h.  
Cellular fate decisions including signal integration, terminal differentiation in development, mechanisms of embryonic stem cell gene regulation/cellular reprogramming, cell death paradigms, and cell death in development and cancer. Same as ACB:6227, MPB:6227.

**MMED:6230 Pathogenesis of Metabolic and Cardiovascular Disorders**  
3 s.h.  
Students focus on metabolic and cardiovascular diseases—the leading cause of morbidity and mortality in the United States; introduction to major subclasses of metabolic and cardiovascular diseases, definition of pathogenesis and clinical features of diseases, and exploration of methodologies used to study diseases; course format includes lecture, critical examination of literature, and demonstration of experimental models.

**MMED:6250 Mechanisms of Parasitism Journal Club**  
1 s.h.  
Reviews of recent publications in molecular parasitology research and thesis research by training grant or journal club students. Same as MICR:6250.

**MMED:6260 Methods for Molecular and Translational Medicine**  
1 s.h.  
Basic and advanced scientific techniques used to integrate biological questions in molecular and translational medicine; particularly useful for comprehensive exam preparation.

**MMED:6270 Pathogenesis of Metabolic and Cardiovascular Disorders**  
3 s.h.  
Students focus on metabolic and cardiovascular diseases—the leading cause of morbidity and mortality in the United States; introduction to major subclasses of cardiovascular diseases, definition of pathogenesis and clinical features of diseases, and exploration of methodologies used to study diseases; format includes lecture, critical examination of literature, and demonstration of experimental models.

**MMED:6280 Critical Thinking in Molecular Medicine**  
1 s.h.  
Opportunity to work closely with participating faculty to gain skill in critical reading of research literature and facility in presenting material to an audience. Requirements: advanced graduate standing.

**MMED:7290 Seminars in Molecular Medicine**  
1 s.h.  
Research findings in molecular biology. Requirements: molecular and cellular biology graduate standing.

**MMED:7305 Molecular Medicine Research**  
arr.  
Requirements: molecular and cellular biology graduate standing.

**MMED:7310 Translational Medicine Education Rounds**  
1 s.h.  
Students obtain clinical insights into their area of specialty in biomedical research through selection of a clinical mentor to complement the expertise of their research mentor; clinical mentors provide students with case studies, clinical scenarios, and physician shadowing opportunities which may allow students to gain new perspectives and insight into applications of biomedical research. Requirements: enrollment in Molecular Medicine Program, completion of rotations, and selection of a research mentor.

**MMED:8115 Molecular Physiology**  
4 s.h.  
Principles of human physiology, organ systems, cell function. Offered fall semesters.
