# Molecular Physiology and Biophysics Courses (MPB)

## MPB Courses

This is a list of courses with the subject code MPB. For more information, see Molecular Physiology and Biophysics (Carver College of Medicine) in the catalog.

### MPB:4199 Research, Independent Study

**arr.**

Recommendations: closed to molecular physiology and biophysics graduate students.

### MPB:5153 Graduate Physiology

4 s.h.

Principles of human physiology, organ systems, cell function. Offered fall semesters. Requirements: grades of C- or higher in BIOL:1411 and CHEM:2210 and CHEM:2220, and graduate standing.

### MPB:5200 Medical Physiology Online

5 s.h.

Fundamental principles of cellular membranes, muscle, sensory organs, motor neurological systems, autonomic nervous systems, cardiovascular, pulmonary, renal, gastrointestinal, endocrine, and reproductive systems; interdependence of organ systems to maintain a normal physiological state using clinical correlates as applied to humans; basic physiological principles that establish a solid foundation for future pathophysiological and pharmacological concepts. Recommendations: medical, dental, physician assistant, nurse anesthesia, physical therapy, or graduate standing.

### MPB:5201 Advanced Physiology Online

3 s.h.

Examination of cellular and organ systems of medical physiology; fundamental principles of cellular membranes including muscle, sensory organs, motor neurological systems, autonomic nervous system, cardiovascular, pulmonary, renal, gastrointestinal, endocrine, and reproductive physiology; emphasis on interdependence of organ systems to maintain a normal physiological state (homeostasis) using clinical correlates as applied to humans; basic physiological principles that establish a solid foundation for future pathophysiological and pharmacological concepts.

### MPB:5241 Neuromuscular Diseases: Case-Based Seminar

1 s.h.

### MPB:6220 Mechanisms of Cellular Organization

3 s.h.

Current understanding of basic cell biological processes; key experiments that led to guiding insights; mechanisms that cells use for compartmentalization and how those mechanisms are regulated; biogenesis of major organelles (e.g., mitochondria, peroxisomes, nucleus, secretory/endocytic membrane system); functions of cytoskeleton in cell motility, organelle motility, and cell division. Prerequisites: BMB:3130. Same as ACB:6220, MMED:6220.

### MPB:6226 Cell Cycle Control

1 s.h.

Cell cycle regulation, DNA damage-dependent cell cycle regulation, redox-dependent cell cycle regulation, cellular senescence. Same as ACB:6226, MMED:6226.

### MPB:6227 Cell Fate Decisions

1 s.h.

Cellular fate decisions including signal integration, terminal differentiation in development, mechanisms of embryonic stem cell gene regulation/cellular reprogramming, cell death paradigms, and cell death in development and cancer. Same as ACB:6227, MMED:6227.

### MPB:6265 Neuroscience Seminar

0-1 s.h.

### MPB:6302 Research Physiology and Biophysics

arr.

Recommendations: molecular physiology and biophysics graduate standing.

### MPB:7402 Thesis

arr.

Requirements: molecular physiology and biophysics PhD candidacy.

### MPB:8115 Human Physiology for Dental Students

4 s.h.

Principles of human physiology, organ systems, cell function. Offered fall semesters. Requirements: grades of C- or higher in BIOL:1411, CHEM:2210, and CHEM:2220; and DDS enrollment.
