Prosthodontics, Professional Certificate

Requirements

The professional Certificate in Prosthodontics requires a minimum of 36 months of study. Students must maintain a cumulative g.p.a. of at least 3.00 to earn the certificate. It prepares individuals for specialty clinical practice in the discipline.

The curriculum includes didactic courses and clinical training in all of the disciplines that make up the broad specialty of prosthodontics, including fixed and removable prosthodontics and dental implants, as well as maxillofacial prosthetics. Patient care is completed in close collaboration with the other dental specialties. Clinically related basic science instruction complements the clinical curriculum.

Students working toward the Certificate in Prosthodontics must pursue the Master of Science in oral science in conjunction with the certificate.

The certificate program is accredited by the Commission on Dental Accreditation of the American Dental Association. Successful completion of the program satisfies the formal training requirement for eligibility to take the American Board of Prosthodontics certification examination.

Graduate Study

The M.S. program prepares individuals for careers in dental education and research and for independent study and professional growth. Students must prepare and defend a thesis for the M.S. in oral science based on original research. Facilities and support personnel for research are available through the college's Iowa Institute for Oral Health Research. See the M.S. in oral science in the Catalog. Successful completion of the M.S. may allow further Ph.D. study.
