Genetics, PhD

Learning Outcomes

The PhD in genetics will:

• develop students’ ability to learn relevant literature, and
  to design and complete successful experiments with rigor
  and reproducibility;
• develop students’ ability to communicate concepts,
  present and publish scientific data, and interact with
  diverse audiences;
• facilitate students as they acquire teaching skills and
  develop teaching effectiveness in the classroom and in the
  laboratory; and
• prepare students for diverse careers in the discipline.
