

# Global Health Studies, BS

The Bachelor of Science with a major in global health studies is designed for students who desire to enter professional programs in the health sciences.

## Learning Outcomes

The Global Health Studies Program equips its students to:

- apply interdisciplinary perspectives drawn from the social sciences and humanities to local and global health issues;
- understand core areas of global health such as infectious and non-communicable diseases, maternal and child health, food sovereignty, environmental health, disability studies, and health disparities;
- analyze health and disease from biomedical, sociocultural, and environmental perspectives;
- understand how health issues affect domestic and international communities;
- recognize the ethical and practical challenges involved in interventions designed to improve health and health equity across cultural and geographical boundaries.
