

Digital Arts

Chair, Department of Theatre Arts

Mary Beth Easley

Coordinator, Digital Arts

Daniel S. Fine (Dance/Theatre Arts)

Undergraduate certificate: digital arts

Website: <https://theatre.uiowa.edu/>

Digital technologies transform how people create, perform, and experience art. The goal of the digital arts certificate program is to give students skills to make works of art that are informed by digital technology, scholarship, disciplinary tradition, and interdisciplinary collaboration. At the core of the certificate is a commitment to innovation and interdisciplinary collaboration in research, teaching, creative work, and the public expression of the university's creative research and scholarship.

Upon completion of the certificate program, students will be able to develop and realize artistic visions using digital technology and work collaboratively with other artists, engineers, or computer scientists. Most courses will include a public dimension, where projects are shown to a public audience.

What Are the Digital Arts?

The digital arts are digital technologies that keep transforming how people create, perform, and experience art.

At the core of the digital arts cluster is a commitment to innovation and interdisciplinary collaboration in research, teaching, creative work, and the public expression of the university's creative research and scholarship. Faculty have home departments in Theatre Arts and Dance, the schools of Music and Art, Art History, and Design, and the College of Engineering.

The Certificate in Digital Arts at the University of Iowa gives students the knowledge and skills "to apply new technologies and integrate multiple media and disciplines in new forms of expression" (Cal Arts, Integrated Media Program). Upon completion of the certificate, students are able to develop and realize artistic visions using digital technology and work collaboratively with other artists, engineers, or computer scientists.

The Department of Theatre Arts, which administers the Certificate in Digital Arts, partners with the schools of Music and Art, Art History, and Design, the departments of Computer Science and Cinematic Arts (College of Liberal Arts and Sciences), and the College of Engineering to offer the certificate.
