Physics and Astronomy

Chair
• Mary Hall Reno

Director, Undergraduate Studies
• Jane M. Nachtman

Director, Graduate Studies
• Vincent Rodgers

Director, Research Operations
• John P. Prineas

Undergraduate majors: physics (BA, BS); applied physics (BS); astronomy (BA, BS)

Undergraduate minors: physics; astronomy

Graduate degrees: MS in physics; MS in astronomy; PhD in physics

Faculty: https://physics.uiowa.edu/people

Website: https://physics.uiowa.edu/

The Department of Physics and Astronomy provides comprehensive and rigorous instruction in all basic aspects of its subjects. It also provides research facilities and guidance in selected specialties for advanced individual scholarly work.

In addition to its undergraduate and graduate programs of study, the department offers several courses that undergraduate students in all majors may use to satisfy the GE CLAS Core Natural Sciences requirement. Look for courses with prefixes ASTR and PHYS under "Natural Sciences" in the GE CLAS Core section of the catalog. The department often offers First-Year Seminars designed for entering undergraduates.

The applied physics degree offers flexibility in the choice of concentration corresponding to career goals, and can also be customized beyond the existing areas of concentration.

Students may pair a BA in physics or astronomy or a BS in applied physics with a Master of Arts in Teaching (MAT), data science, or another postgraduate degree. More information can be found on the Department of Physics and Astronomy website.

The department also participates in an interdisciplinary doctoral program, the Program in Applied Mathematical and Computational Sciences (Graduate College).

All of the department’s courses and advanced laboratories are taught by faculty members. Faculty members also supervise associated laboratories taught by graduate students. Enrollment in courses beyond the elementary level is typically 15 to 20 students; there is ample opportunity for individual work. Special introductory courses are offered for students majoring in physics and astronomy and for others with a special interest in these subjects.

Programs

Undergraduate Programs of Study

Majors
• Major in Physics (Bachelor of Arts)
• Major in Astronomy (Bachelor of Arts)
• Major in Physics (Bachelor of Science)
• Major in Applied Physics (Bachelor of Science)
• Major in Astronomy (Bachelor of Science)

Minors
• Minor in Physics
• Minor in Astronomy

Graduate Programs of Study

Majors
• Master of Science in Physics
• Master of Science in Astronomy
• Doctor of Philosophy in Physics

Facilities

The department has a number of well-equipped laboratories and observatories. Faculty, students, and staff access national supercomputers via the internet, and have access to high performance computing clusters on campus. The central machine shop is fully equipped and staffed by skilled instrument makers and machinists, and there are electronics and machine shops for use by advanced students and research staff.

Experimental research is conducted in astronomy (optical, radio, and X-ray), atomic and molecular physics, condensed matter physics, elementary particle physics, laser physics, medical physics, plasma physics, and space physics. Extensive facilities are available for the construction of specialized research equipment and for data processing and analysis.

State-of-the-art semiconductor materials and devices are grown in two molecular beam epitaxy machines. Ultrafast laser techniques are developed and used to probe electron transport, energy relaxation, recombination, and spin dynamics in the novel nanostructures grown in these machines. Experiments also are conducted on laser-induced coherent phenomena and coherent control of charge carriers in semiconductor nanostructures. The experimental condensed matter program is closely coordinated with the condensed matter theory group.

Plasma physics is an active area of experimental and theoretical research. Laboratory experiments studying plasma processes of importance in various space and astrophysical plasmas are performed in a Q machine, including experiments on waves and instabilities in dusty plasmas. Additional laboratory and microgravity experiments with dusty plasmas include studies of Coulomb crystals, shocks, and complex fluids. Glow discharges for plasma processing applications are studied using laser diagnostics and numerical simulations. Wave propagation and plasma particle dynamics also are studied in collisionless plasmas through laboratory experiments. Laser techniques are developed for measuring
plasma flow and following particle orbits. Plasma theory efforts include analytical and numerical investigations of magnetic reconnection and turbulence in space and astrophysical plasmas; collaboration with laboratory and space plasma experimental groups in strongly coupled dusty plasmas, waves, and instabilities; and free electron lasers and hydrodynamic turbulence.

State-of-the-art laser systems are available for high-resolution spectroscopic measurement and ultrafast studies of molecular structure, for collisional relaxation and nonlinear optical effects in atomic and molecular systems, and for plasma diagnostics.

Experimental research in elementary particle physics is carried out at Fermi National Accelerator Laboratory, Stanford Linear Accelerator Center, CERN in Switzerland, and other international laboratories. The present generation of high-energy experiments has been designed to probe both the strong nuclear force and the weak interactions.

The department is well-equipped for research and instruction in observational astronomy. The primary optical instrument is a fully automated 15-inch telescope at a dark-sky site in Arizona. The telescope is equipped with CCD cameras and a variety of filters. There are 3-meter and 4.5-meter radio telescopes on the roof of Van Allen Hall, which are used for instruction and student research projects.

Research programs in galactic and extragalactic radio astronomy are carried out using the facilities of the National Radio Astronomy Observatory, including the Very Large Array and the Very Long Baseline Array, one element of which is 10 miles north of campus. Current long-term research activities include studies of the center of the Milky Way galaxy; investigations of extragalactic radio sources; the formation of powerful winds in young, luminous stars; radio-wave scattering in the interstellar and interplanetary media; and interacting binary stars. There is a research program in X-ray astronomy and a laboratory for instrument development. Research topics in X-ray astronomy concentrate on observations of X-ray emission from black holes and supernova remnants, using existing spacecraft.

Active theoretical research is carried on in astrophysics; atomic, molecular, and optical physics; condensed matter physics; elementary particle physics; laser physics; mathematical physics; nuclear physics; plasma physics; and space physics. An active mathematical physics seminar fosters the exchange of ideas between mathematics and physics.

The primary emphasis of Iowa's program in experimental and theoretical space physics is on studies of cosmic and heliospheric physics, magnetospheric physics, and magnetosphere-ionosphere interactions. Facilities are available for designing and constructing spaceflight instruments. Investigators in the department have flown instruments for studying plasmas, energetic charged particles, auroral images, plasma waves, and radio emissions on a wide variety of terrestrial and planetary spacecraft, including Pioneer 10 and 11, Dynamics Explorer, Voyager 1 and 2, Galileo, Polar, Cassini, and Mars Express.

### Courses

- Physics Courses [p. 2]
- Astronomy Courses [p. 5]

### Physics Courses

**PHYS:1000 First-Year Seminar** 1 s.h.
Small discussion class taught by a faculty member; topics chosen by instructor; may include outside activities (e.g., films, lectures, performances, readings, visits to research facilities). Requirements: first- or second-semester standing.

**PHYS:1200 Physics of Everyday Experience** 3 s.h.
Principles of physics; basic motion, behavior of fluids, waves, temperature and heat, gravity and planetary motion, electricity and magnetism, optics, nuclear energy, radioactivity, and medical imaging technology; examples from everyday experience; for non-science majors. GE: Natural Sciences without Lab.

**PHYS:1400 Basic Physics** 3-4 s.h.
Quantitative treatment of mechanics, electricity, heat, liquids, gases, and atomic, nuclear, and elementary particle physics. Requirements: must have completed high school trigonometry or achieved a minimum ALEKS score of 75%. GE: Natural Sciences with Lab; Natural Sciences without Lab.

**PHYS:1409 Basic Physics Lab** 1 s.h.
Laboratory for PHYS:1400. Corequisites: PHYS:1400 (if not taken as a prerequisite). GE: Natural Sciences Lab only.

**PHYS:1410 Physics of Sound** 3-4 s.h.
Acoustical foundations of music; production of sound by vibrating objects, properties of sound waves, vocal acoustics, hearing, room acoustics, principles of electroacoustics. GE: Natural Sciences with Lab; Natural Sciences without Lab.

**PHYS:1511 College Physics I** 4 s.h.
Algebra-based treatment of mechanics, waves, thermodynamics, and special relativity. Requirements: must have completed high school trigonometry or achieved a minimum ALEKS score of 75%. GE: Natural Sciences with Lab.

**PHYS:1512 College Physics II** 4 s.h.
Continuation of PHYS:1511; algebra-based treatment of electricity, magnetism, light, and modern physics. Prerequisites: PHYS:1611 or PHYS:1511. GE: Natural Sciences with Lab.

**PHYS:1611 Introductory Physics I** 4 s.h.

**PHYS:1612 Introductory Physics II** 4 s.h.
Continuation of PHYS:1611; calculus-based treatment of electricity, magnetism, and light. Prerequisites: PHYS:1611. Corequisites: MATH:1560 or MATH:1860. GE: Natural Sciences with Lab.

**PHYS:1619 Introductory Physics II Lab** 1 s.h.
Laboratory for PHYS:1612. Requirements: 3 s.h. in PHYS:1612. GE: Natural Sciences Lab only.

**PHYS:1701 Physics I** 4 s.h.
Introduction to physics; calculus-based treatment of Newtonian mechanics for point particles and rigid bodies; conservation laws. Offered fall semesters. Corequisites: MATH:1850. Requirements: physics or astronomy major. GE: Natural Sciences with Lab.

**PHYS:1702 Physics II** 4 s.h.
PHYS:1999 Undergraduate Seminar  
Selected topics in physics and astronomy; discussion, presentations.

PHYS:2703 Physics III  
Continuation of PHYS:1702; introduction to physics; calculus-based treatment of electromagnetic waves and optics; mechanical and sound waves; thermal physics. Offered fall semesters. Prerequisites: PHYS:1702.

PHYS:2704 Physics IV  
3-4 s.h.  
Introduction to quantum mechanics and other topics in modern physics, including special relativity, atomic and solid state physics. Offered spring semesters. Prerequisites: (PHYS:1612 or PHYS:2703) and (MATH:1860 or MATH:1550). Requirements: for 3 s.h. option—nonmajor.

PHYS:2905 Programming for Physics  
2 s.h.  
Introduction to scientific programming for applications in physics.

PHYS:2990 Reading in Physics  
arr.  
Selected topics in physics.

PHYS:3500 Undergraduate Practicum  
arr.  
Experiences that provide special opportunities for students to gain practical and hands-on training related to topics in physics; practicums typically arranged by individual faculty members. Requirements: application and acceptance into practicum.

PHYS:3710 Intermediate Mechanics  
3 s.h.  
Introduction to Newtonian mechanics; noninertial reference systems; central forces, celestial mechanics; rigid body motion; Lagrangian and Hamiltonian equations of motion; small oscillations. Prerequisites: (PHYS:1611 or PHYS:1511 or PHYS:1701) and (MATH:1860 or MATH:1560).

PHYS:3730 Statistical Physics  
3 s.h.  
Integrated introduction to subjects of thermodynamics, statistical mechanics, classical and quantum statistics of interacting particles; kinetic theory; emphasis on applications. Prerequisites: PHYS:2704.

PHYS:3741 Introduction to Quantum Mechanics I  
3 s.h.  
Superposition principle, Stern-Gerlach experiment, linear operators, measurement theory, time evolution, angular momentum, wave mechanics in one dimension, one-dimensional harmonic oscillator, two-body problems with central forces, and the hydrogen atom. Prerequisites: MATH:2850 and PHYS:2704 and MATH:2700.

PHYS:3742 Introduction to Quantum Mechanics II  
3 s.h.  
Continuation of PHYS:3741; Perturbation theory, variational methods, WKB approximation, scattering, Helium atom, periodic table, atomic spectroscopy, transition rates, and other selected applications. Prerequisites: PHYS:3741.

PHYS:3756 Intermediate Laboratory  
3 s.h.  
Introduction to instruments and techniques of experimental physics and basic skills needed for carrying out experimental physics research; hands-on use of a variety of instruments and equipment. Prerequisites: PHYS:2704. Corequisites: PHYS:3811.

PHYS:3811 Electricity and Magnetism I  
3 s.h.  
Introduction to electricity and magnetism; topics include electrostatics, magnetostatics, potential theory, and electric and magnetic fields in matter. Prerequisites: (MATH:3550 or MATH:2850) and (PHYS:1612 or PHYS:1702 or PHYS:1512).

PHYS:3812 Electricity and Magnetism II  
3 s.h.  
Continuation of PHYS:3811; introduction to electricity and magnetism; topics include Maxwell’s equations, electrodynamics, electromagnetic waves, radiation, and special relativity. Prerequisites: PHYS:3811.

PHYS:3850 Electronics  
4 s.h.  
Design and construction of small circuits; use of measurement instruments—oscilloscope, multimeter, function generator; circuits, including transistors, operational amplifiers, digital, analog-to-digital conversion. Prerequisites: PHYS:1512 or PHYS:1612 or PHYS:1702. Requirements: physics or astronomy major.

PHYS:4720 Introductory Optics  
3 s.h.  
Wave motion and superposition, electromagnetic theory, photons, propagation of light, geometrical and physical optics, interference, diffraction, polarization, and Fourier optics; optical components, devices, and systems. Prerequisites: (PHYS:1512 or PHYS:2703 or PHYS:1612) and (MATH:1560 or MATH:1860). Same as ECE:4720.

PHYS:4726 Electro Optics  
3 s.h.  
Wave equation solutions; optical birefringence; finite beam propagation in free space, dielectric waveguides and fibers; optical resonators; nonlinear phenomena; electro-optic, acousto-optic modulation; optical detection, noise; application to communication systems. Requirements: for ECE:5790—ECE:3700; for PHYS:4726—PHYS:3812. Same as ECE:5790.

PHYS:4728 Introductory Solid State Physics  
3 s.h.  
Phenomena associated with solid state; classification of solids and crystal structures, electronic and vibrational properties in solids; thermal, optical, magnetic, dielectric properties of solids. Prerequisites: PHYS:3741. Same as ECE:4728.

PHYS:4731 Plasma Physics I  
3 s.h.  
Physics of ionized gases, including orbit theory, guiding center motion, adiabatic invariants, ionization balance description of plasmas by fluid variables and distribution functions; linearized wave motions, instabilities; magnetohydrodynamics. Prerequisites: PHYS:3812.

PHYS:4740 Elementary Particles and Nuclear Physics  
3 s.h.  
Accelerators, particle detectors, passage of radiation through matter; nuclear structure, nuclear reactions; quark model of hadrons; strong, electromagnetic, weak interactions of elementary particles; gauge theories, intermediate vector bosons; unification of electromagnetic and weak interactions. Prerequisites: PHYS:3741.

PHYS:4750 Advanced Laboratory  
3 s.h.  
Advanced experimental work and development of new experiments. Prerequisites: PHYS:3756.

PHYS:4761 Mathematical Methods of Physics I  
3 s.h.  
Functions of complex variables, integration methods, linear vector spaces, tensors, matrix algebra. Prerequisites: MATH:2850.

PHYS:4762 Mathematical Methods of Physics II  
3 s.h.  
Continuation of PHYS:4761; Hilbert space, special functions, Fourier transform and expansions in orthogonal polynomials, differential equations, Green’s functions. Prerequisites: PHYS:4761.
Selected topics in physics. PHYS:5905
Special relativity, motion of charges in fields, theories of
PHYS:5812
physical optics, multipole expansion of radiation field.
PHYS:5811
Green's functions, Maxwell's equations, radiation theory,
PHYS:5810
Advanced electromagnetostatics, boundary value problems,
PHYS:5805
electricity and magnetism, eigenvalue problems in quantum
PHYS:5804
mechanics, Monte Carlo simulations in statistical mechanics,
PHYS:5803
methods of data analysis. Prerequisites: PHYS:3741 and
PHYS:5802
PHYS:3811 and PHYS:3710.
PHYS:4905
Introduction to scientific programming using the Python
PHYS:4904
language and linear algebra for applications in physics.
PHYS:4903
PHYS:3800
Selected topics in physics.
PHYS:4999
Supervised research leading to written report or oral
PHYS:5000
presentations.
PHYS:4998
Workshops and special training opportunities for
PHYS:5000
postbaccalaureate students; may include collaborations with
PHYS:4997
other departments, institutions, or externally funded research
PHYS:4996
organizations.
PHYS:5710
Dynamics of mass points; Lagrange multipliers, small
PHYS:5709
oscillations, Hamilton's equations; canonical transformations,
PHYS:5708
Hamilton-Jacobi theory; chaos. Prerequisites: PHYS:3710.
PHYS:5730
Probability concepts; kinetic equations; classical and quantum
PHYS:5729
equilibrium statistical mechanicals with applications, including
PHYS:5728
ideal and imperfect gases and phase transitions, irreversible
PHYS:5727
processes, fluctuation-dissipation theorems. Prerequisites:
PHYS:5726
PHYS:4731.
PHYS:5746
Responsible conduct and ethics training.
PHYS:6723
Quantum Optics and Nanophotonics 3 s.h.
PHYS:6722
Classical theory of emission and absorption of light, classical
PHYS:6721
dispersion, semiclassical approach, thermal and laser sources,
PHYS:6720
photons, photon statistics, quantization of electromagnetic
PHYS:6719
fields, quantum coherence, noise, Jaynes-Cummings model,
PHYS:6718
squeezed light, metamaterials, plasmonics, and polaritons.
PHYS:6717
Prerequisites: PHYS:3741 and PHYS:3812.
PHYS:6725
Microfabrication and Thin Film Materials 3 s.h.
PHYS:5742
Microfabrication and nanofabrication techniques and thin
PHYS:5741
film materials growth used to create micro-, nano-, and
PHYS:5740
opto-electronic devices that underlie modern technology;
PHYS:5739
introduction to microfabrication techniques, physics, and
PHYS:5738
chemistry; growth and properties of thin film materials upon
PHYS:5737
which fabrication is performed; review of materials science;
PHYS:5736
introduction to vacuum science and technology; survey of
PHYS:5735
micro- and nano-devices; examination of thin film growth and
deposition science, plasma etching and sputtering, micro- and
nano- patterning and characterization, and film nucleation,
growth, structure, and properties. Prerequisites: PHYS:2704
or CHEM:4430 or ME:3040. Recommendations: background in
thermal and statistical physics, introductory quantum
mechanics, and introductory chemistry. Same as ME:6725.
PHYS:7270
Ethics in Physics for Graduate Students arr.
PHYS:7604
Responsible conduct and ethics training.
PHYS:7720
Semiconductor Physics 3 s.h.
PHYS:7722
Electronic, optical, and materials properties of
PHYS:7721
semiconductors. Prerequisites: PHYS:4728 and PHYS:5742.
PHYS:7720
Same as ECE:7720.
PHYS:7722
Advanced Condensed Matter 3 s.h.
PHYS:7721
Elementary excitations, plasmonics, exchange/magnetism,
PHYS:7720
hyperfine interactions, resonance, superconductivity,
topological materials. Prerequisites: PHYS:7720.
PHYS:7729
Plasma Physics II 3 s.h.
PHYS:7730
Continuation of PHYS:4731; cold plasma waves, MHD stability,
PHYS:7728
kinetic theory of plasmas, including Landau damping and
PHYS:7727
velocity space instabilities; nonlinear evolution. Prerequisites:
PHYS:4731.
PHYS:7730
Advanced Plasma Physics I 3 s.h.
PHYS:7729
Microscopic plasma behavior: statistical mechanics of
PHYS:7728
plasmas; Liouville equation; BBGKY hierarchy; Fokker-Planck
PHYS:7727
equation and relaxation processes; Vlasov equation and linearized
PHYS:7726
wave motion; shocks, nonlinear plasma motions, and
PHYS:7725
instabilities; fluctuations and radiation processes; topics from
PHYS:7724
recent literature.
PHYS:7740
Introduction to Quantum Field Theory 3 s.h.
PHYS:7746
Quantization of relativistic and nonrelativistic field theories,
covariant perturbation theory, theory of renormalization,
dimensional regularization, renormalization group theory,
introduction to gauge theories and anomalies. Prerequisites:
PHYS:5742.
PHYS:7746
Particle Physics 3 s.h.
PHYS:7760
Elementary particle properties and phenomenology, quark-
PHYS:7759
parton models, quantum chromodynamics, unified theory of
PHYS:7758
weak and electromagnetic interactions.
PHYS:7760
General Relativity 2-3 s.h.
PHYS:7759
Einstein's theory of gravitation; principles of general relativity.
PHYS:7761 Cosmology 3 s.h.
Einstein's theory of general relativity radically changed the way we understand the cosmos by providing a mathematical description of space-time itself—this is cosmology; the last three decades have shown remarkable evidence that cosmology is an experimentally testable theory; students explore mathematical underpinnings of cosmology by studying the early universe, the cosmic microwave background, inflation, big bang nucleosynthesis, neutrino physics, quantum field theory effects on space-time, and other issues. Prerequisites: PHYS:7760.

PHYS:7840 Quantum Gauge Theories 3 s.h.

PHYS:7905 Special Topics in Physics arr.
Current research.

Current research. Same as ECE:7930.

PHYS:7936 Seminar: Space Physics arr.
Current research.

PHYS:7945 Seminar: Math/Physics arr.
Current research.

PHYS:7946 Seminar: Nuclear and Particle Physics arr.
Current research.

PHYS:7990 Research: Physics arr.
Essay on topic chosen in consultation with faculty member. Requirements: candidacy for MS with critical essay.

PHYS:7992 Individual Critical Study arr.
Essay on topic chosen in consultation with faculty member. Requirements: candidacy for MS with critical essay.

Astronomy Courses

ASTR:1000 First-Year Seminar 1 s.h.
Small discussion class taught by a faculty member; topics chosen by instructor; may include outside activities (e.g., films, lectures, performances, readings, visits to research facilities).

ASTR:1060 Big Ideas: Origins of the Universe, Earth, and Life 3 s.h.
Origin of the universe, the biochemistry of life, and the origin of life on Earth; for non-science majors. Recommendations: first-year or sophomore standing. GE: Natural Sciences without Lab. Same as BIOL:1060, EES:1060.

ASTR:1070 Stars, Galaxies, and the Universe 3-4 s.h.
Students survey topics including the Sun; life cycles of stars including black holes and pulsars; diversity of galaxies including the Milky Way and distant quasars; cosmology—the history, structure, and fate of the universe; current results from recent astronomical observations; for non-science majors. Recommendations: closed to physics and astronomy majors. GE: Natural Sciences with Lab; Natural Sciences without Lab.

ASTR:1079 Introductory Astronomy Laboratory 1 s.h.
Laboratory for ASTR:1070. GE: Natural Sciences Lab only.

ASTR:1080 Exploration of the Solar System 4 s.h.
Survey of the solar system; topics include physical properties of the planets, comets, and asteroids; origin of the solar system; search for extrasolar planetary systems; search for life in the universe; current results of recent planetary space missions; night sky observation; for non-science majors. Recommendations: closed to physics and astronomy majors. GE: Natural Sciences with Lab.

ASTR:1085 Citizen Astronomy 3 s.h.
Survey of topics in astronomy and astrophysics; topics include the Solar System and exoplanets, nearby stars in the Galaxy, distant galaxies and unseen black holes; focus on citizen science projects that allow students to examine real data; for non-science majors. GE: Natural Sciences without Lab.

ASTR:1771 Fundamental Astronomy I: The Solar System and Exoplanets 4 s.h.
Quantitative introduction to physical principles needed to understand astronomical phenomena (e.g., laws of motion, gravitation, radiation), astronomical instrumentation, properties structure, and evolution of solar system bodies, exoplanets, and the search for life. Requirements: four years of high school math. GE: Natural Sciences with Lab.

ASTR:1772 Fundamental Astronomy II: Evolution of Stars, Galaxies, and the Universe 4 s.h.
Continuation of ASTR:1771; quantitative introduction to stellar, Galactic, and extragalactic astronomy; topics include the Sun, stellar evolution, stellar corpses such as neutron stars and black holes, the Milky Way galaxy, the interstellar medium, galaxies, cosmology, and fate of the universe. Prerequisites: ASTR:1771. Requirements: four years of high school math. GE: Natural Sciences with Lab.

ASTR:2991 Reading in Astronomy arr.
Selected topics in astronomy.

ASTR:3500 Undergraduate Practicum arr.
Undergraduate practicum experiences that provide special opportunities for students to gain practical and hands-on training related to topics in astronomy; practicums typically arranged by individual faculty members. Requirements: application and acceptance into practicum.

ASTR:3771 Introduction to Astrophysics I 3 s.h.
Topics include celestial mechanics, radiative transfer, stellar structure and evolution, and star formation; first in a two-semester sequence. Prerequisites: PHYS:2704 and ASTR:1772 and ASTR:1771 and (MATH:2850 or MATH:3550) and (MATH:2700 or MATH:2550). Recommendations: computer programming experience.

ASTR:3772 Introduction to Astrophysics II 3 s.h.
Continuation of ASTR:3771; topics include post-main-sequence stellar evolution, stellar remnants, close binary stars, the Milky Way and other galaxies, active galactic nuclei, galaxy evolution, and cosmology; second in a two-semester sequence. Prerequisites: ASTR:3771.

ASTR:4850 Observational Techniques in Astronomy 3 s.h.
Introduction to instruments of optical (and sometimes multi-wavelength) astronomy and basic skills needed for carrying out observational astronomical research; hands-on use of observing equipment; nighttime observing sessions. Prerequisites: PHYS:2704 and ASTR:1772 and ASTR:1771.

ASTR:4996 Reading in Astronomy arr.

ASTR:6782 Extragalactic Astronomy 3 s.h.
Normal and active galaxies, large scale structure, the early Universe, cosmology.
Physics and Astronomy

ASTR:6785 The Interstellar Medium 3 s.h.
The interstellar medium; optical properties of small interstellar grains, radiative processes in interstellar gas, structure of HII regions, interstellar shock waves, supernova remnants, modification of interstellar medium by luminous stars, molecular clouds.

ASTR:6790 Stellar Astrophysics 3 s.h.
Stellar interiors, nuclear astrophysics; advanced topics.

ASTR:6870 Radiative Processes in Astrophysics 3 s.h.
Physics of stars including interiors, spectra, nuclear processes, plasma hydrodynamics, and the extreme physics of condensed final states.

ASTR:6880 High Energy Astrophysics 3 s.h.
Detection of X-rays and gamma-rays, black holes and neutron stars, accretion onto compact objects, pulsars, supernova remnants, cosmic rays, and gamma-ray bursts.

ASTR:7775 Special Topics in Astrophysics 1-3 s.h.
Advanced lectures.

ASTR:7830 Space and Astrophysical Plasma Physics 3 s.h.
Dynamics and evolution of space and astrophysical plasmas; heliosphere, planetary magnetospheres, accretion disks; plasma waves, shock waves, turbulence.

ASTR:7970 Seminar: Astrophysics and Space Physics arr.
Current research.

ASTR:7991 Research: Astronomy arr.
Original research in observational, theoretical astronomy.
