

Palliative Care, Professional Certificate

Requirements

Admission to the professional Certificate in Palliative Care has been suspended; the program is not accepting students at this time.

The certificate program prepares students to practice as palliative care generalists or champions upon graduation from the Doctor of Pharmacy (PharmD) program. Students who complete the certificate will possess the knowledge, skills, and attitudes to serve patients living with serious illnesses across the trajectory of life in a variety of general pharmacy practice environments and non-palliative pharmacy specialties, including critical care, emergency medicine, geriatrics, and cardiology. The program addresses the educational needs of pharmacy students who may provide pharmaceutical care in a community pharmacy setting, a long-term care pharmacy, oncology, cardiology, infectious disease, critical care, transplant, and emergency medicine. The certificate also prepares graduates to pursue advanced postgraduate clinical training in palliative care and hospice, including palliative care residencies and fellowships.
