Epidemiology, M.S.

Requirements

The Master of Science program in epidemiology requires at least 39 s.h. of graduate credit and is offered with or without thesis. Students who choose to complete the degree without thesis are required to pass a comprehensive examination. All students must maintain a cumulative g.p.a. of at least 3.00. Those who receive a grade of C in 7 s.h. of coursework may be dismissed from the program.

Students are required to attend 80 percent of all Department of Epidemiology seminar meetings and journal club meetings for three semesters. They must present one scientific poster at the departmental level before they may graduate, and the department recommends that they present at the international, national, regional, state, or University level before graduating.

The Master of Science with a major in epidemiology requires the following coursework.

Core Courses

Students must take CPH:7270 Principles of Scholarly Integrity: Public Health during their first year in the fall semester (enroll for 0 s.h.) and in the spring semester (enroll for 1 s.h.). They must retake CPH:7270 if they completed the course more than four years ago or if they have changed degree programs.

Students enrolled part-time (less than 9 s.h.) who have a graduate research assistantship appointment may choose to register in EPID:5925 Epidemiology Journal Club: Evaluating the Literature for 1 s.h.; however, the credit earned for this course will not be applied toward the minimum semester hours required for the M.S. in epidemiology.

Students with a strong biosciences background may choose to substitute PATH:5270 Pathogenesis of Major Human Diseases in place of PATH:8133 Introduction to Human Pathology for Graduate Students if it better complements their training plan. This is an advanced course that requires a strong foundation in molecular biology and related disciplines, but may be suitable for some students.

Electives

Students must earn a minimum of 5 s.h. in elective coursework from Department of Epidemiology courses (prefix EPID) and 2 s.h. in additional graduate coursework pertinent to a student’s educational goals and background (the additional 2 s.h. may be earned in an epidemiology course or in another graduate course, with the advisor’s approval). The following courses are recommended.

Other Requirements

Department of Epidemiology Seminar

Every week during the academic year, the Department of Epidemiology seminar provides a forum for speakers to present information or research pertaining to diverse topics in epidemiology. Contact information for the seminar coordinators is located on the Department of Epidemiology website under Preceptorship, Journal Club, and Seminar Contacts. Information about the schedule is distributed each semester and also is available on the University of Iowa Events Calendar. Students are expected to achieve at least 80 percent attendance at the seminar during each semester of enrollment.

Journal Club for First-Year Students

Journal Club for first-year students is for those who are new to the department and is offered in the fall semester. The focus
is for students to gain experience reading, in interpretation, 
and in critically evaluating recently published journal articles. 
Students should register in EPID:5925 Epidemiology Journal 
Club: Evaluating the Literature, section 1.

Journal Club
Every other week during the academic year, the Journal Club 
meets to discuss articles of interest in the field. Contact 
information for the Journal Club coordinators can be found on 
the Department of Epidemiology website under Preceptorship, 
Journal Club, and Seminar Contacts. Information about the 
schedule is distributed to students each semester. Students 
are required to achieve at least 80 percent attendance at 
Journal Club for three semesters during their time in the 
program.

Scientific Poster Requirement
Every student is required to present at least one scientific 
poster at the department level, and is encouraged to present 
at the international, national, regional, state, or university 
level at some point prior to graduation. A student’s advisor or 
thesis/preceptorship mentor can help determine the suitability 
and timeline for the poster presentation.

For nonthesis students, this poster requirement takes 
the place of an oral seminar presentation as part of the 
preceptorship requirement. Nonthesis students would typically 
formulate preceptorship research into a poster presentation, 
though the requirement may be met by a poster presentation 
of other research, such as from an independent study or 
research related to employment.

For thesis students, the poster requirement is in addition to 
the oral seminar presentation requirement for the thesis. 
Thesis students would typically formulate thesis research into 
a poster presentation, though the requirement may be met 
by a poster presentation of other research, such as from an 
independent study or research related to employment. The 
poster must be submitted for review to the student’s advisor 
or thesis/preceptorship mentor a minimum of 10 days before 
the poster session. A Department of Epidemiology poster 
session is held at the end of the fall and spring semesters.

Master’s Final Examination for the M.S. 
Without Thesis
The master’s examination is a written in-class exam that 
measures learning of epidemiological concepts and knowledge 
of epidemiological thoughts as presented in required courses. 
This exam is offered twice per year.

Master’s Thesis Defense for the M.S. 
With Thesis
The master’s thesis defense is an oral presentation of the 
purpose, methods, and results of the thesis research. A 
specially formed committee thoroughly examines a student’s 
area of knowledge associated with the context of the work. 
The goal of the thesis is a document that is publishable in a 
peer-reviewed journal.
